GAMME ODACIER

Profils de Gamme Unico de chez FORSTER
Profils Acier à Isolation Thermique
Profils Acier traité Sendzimir

La galvanisation Sendzimir est une galvanisation par trempe en continu, sans traitement préliminaire au moyen de décapants ou de fondants. La galvanisation Sendzimir est caractérisée par des propriétés d'adhérence particulièrement bonnes et par une résistance élevée à la corrosion.

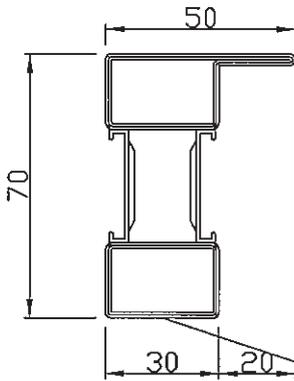

Possibilités :

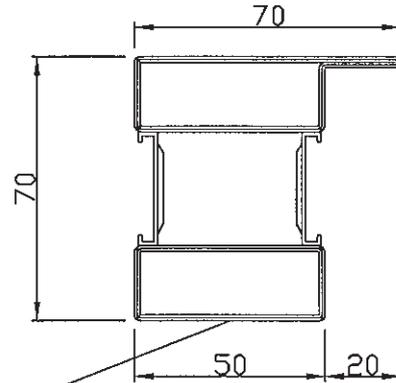

- Standard
- Pare-Flamme 1/2 H (E30)
- Pare-Balles
